RECOMMENDATIONS FOR PAPER TOWELS

FOLD NAME	DESCRIPTION	ILLUSTRATION	PROS AND CONS
C-fold arranged in tiers Recommended for **under-counter** paper towel dispensers	First paper towels are folded centrically. Then both sides are folded inwards (to a „C"). The paper towels are lying on each other separately.		+ large paper size - paper towel must be unfolded manually after withdrawal.
V-fold arranged in zigzag Recommended for **surface-** and **flush-mounted** paper towel dispensers	Paper towel is folded in the middle once (to a "V"). Towels are lying into each other.		+ Low acquisition costs - small paper size
Z-fold arranged in zigzag "Interfold" "Non Stop" Recommended for **surface-** and **flush-mounted** paper towel dispensers	Paper towel is folded twice (to a "Z"). Towels are lying into each other.		+ Larger paper size comparing to V-fold - High consumption due to "Non Stop"
W-fold arranged in zigzag "Interfold" "One stop" Recommended for **surface-** and **flush-mounted** paper towel dispensers	Paper towels are lying in two parallel rows each three times folded (to a "W"). Each paper towels is joined to the next with a perforated tear-off part ("One stop"). After tear-off of the first towel of row one the lowest towel of the second row is looking out of the bottom of the dispenser.		+ Large paper size + Towel is completely unfolded after withdrawal + Low consumption - some higher acquisition costs - nearly no standard paper sizes
